ANSWERS

$$\begin{aligned} 1) \textcircled{1} F_{gA} &= mg \\ &= (30\text{kg})(9.8\text{m/s}^2) \\ &= 294\text{N} \end{aligned}$$

$$\begin{aligned} \textcircled{2} F_{gB} &= mg \\ &= (20\text{kg})(9.8\text{m/s}^2) \\ &= 196\text{N} \end{aligned}$$

$$\begin{aligned} F_{gAx} &= 294\text{N} \sin 60^\circ \\ &= 254.6\text{N} \end{aligned}$$

$$\begin{aligned} F_{gBx} &= 196\text{N} \sin 45^\circ \\ &= 138.6\text{N} \end{aligned}$$

$\textcircled{2} F_{gAx} > F_{gBx}$ so the masses move
"to the left"

$$\begin{aligned} F_{\text{net}} &= F_{gAx} - F_{gBx} \\ &= 254.6\text{N} - 138.6\text{N} \\ &= 116\text{N} \end{aligned}$$

$$\begin{aligned} \textcircled{3} F_{\text{net}} &= ma \\ a &= \frac{F_{\text{net}}}{m} \\ &= \frac{116\text{N}}{50\text{kg}} \\ &= 2.32\text{m/s}^2 \end{aligned}$$

$\textcircled{4}$ Isolate A

$$\begin{aligned} F_{\text{net}} &= F_{gAx} - T \\ ma &= 254.6\text{N} - T \\ (30\text{kg})(2.32\text{m/s}^2) &= 254.6\text{N} - T \\ T &= 254.6\text{N} - 69.6\text{N} \\ T &= \underline{\underline{185\text{N}}} \end{aligned}$$

$$\begin{aligned} 2) \textcircled{1} F_{gB} &= mg \\ &= (2.0 \text{ kg})(9.8 \text{ m/s}^2) \\ &= 19.6 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{2} F_{gA} &= mg \\ &= (2.5 \text{ kg})(9.8 \text{ m/s}^2) \\ &= 24.5 \text{ N} \end{aligned}$$

$$\begin{aligned} F_{gAx} &= 24.5 \text{ N} \sin 25^\circ \\ &= 10.35 \text{ N} \end{aligned}$$

$$\begin{aligned} F_{gAy} &= 24.5 \text{ N} \cos 25^\circ \\ &= 22.2 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{3} F_f &= \mu F_N \\ &= (0.30)(22.2 \text{ N}) \\ &= 6.66 \text{ N} \end{aligned}$$

$$* F_N = F_{gAy}$$

$$\begin{aligned} \textcircled{4} F_{\text{net}} &= F_{gB} - F_{gAx} - F_f \\ &= 19.6 \text{ N} - 10.35 \text{ N} - 6.66 \text{ N} \\ &= 2.59 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{5} F_{\text{net}} &= ma \\ a &= \frac{F_{\text{net}}}{m} \\ &= \frac{2.59 \text{ N}}{4.5 \text{ kg}} \\ a &= \underline{\underline{0.58 \text{ m/s}^2}} \end{aligned}$$

$$\begin{aligned} 3) \textcircled{1} F_{g_5} &= mg \\ &= (5.0 \text{ kg})(9.8 \text{ m/s}^2) \\ &= 49 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{2} F_{g_2} &= mg \\ &= (2.0 \text{ kg})(9.8 \text{ m/s}^2) \\ &= 19.6 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{3} F_{\text{net}} &= F_{g_5} - F_{g_2} \\ &= 49 \text{ N} - 19.6 \text{ N} \\ &= 29.4 \text{ N} \end{aligned}$$

$$\begin{aligned} \textcircled{4} F_{\text{net}} &= ma \\ a &= \frac{F_{\text{net}}}{m} \\ &= \frac{29.4 \text{ N}}{7 \text{ kg}} \\ &= 4.2 \text{ m/s}^2 \end{aligned}$$

⑤ Isolate 5kg

$$\begin{aligned} \downarrow + \quad F_{\text{net}} &= F_{g_5} - T \\ ma &= 49 \text{ N} - T \\ (5 \text{ kg})(4.2 \text{ m/s}^2) &= 49 \text{ N} - T \\ 21 \text{ N} &= 49 \text{ N} - T \\ T &= 49 \text{ N} - 21 \text{ N} \\ \underline{\underline{T}} &= \underline{\underline{28 \text{ N}}} \end{aligned}$$

4) ① Find a

$$v_i = 0$$

$$\Delta d = 0.600 \text{ m}$$

$$a = ?$$

$$\Delta t = 0.70 \text{ s}$$

$$\Delta d = \cancel{v_i \Delta t} + \frac{1}{2} a (\Delta t)^2$$

$$\begin{aligned} a &= \frac{\Delta d}{\frac{1}{2} (\Delta t)^2} \\ &= \frac{0.600 \text{ m}}{\frac{1}{2} (0.70 \text{ s})^2} \\ &= 2.45 \text{ m/s}^2 \end{aligned}$$

$$\begin{aligned} \textcircled{2} F_{g1} &= mg \\ &= (10.0 \text{ kg})(9.8 \text{ m/s}^2) \\ &= 98 \text{ N} \end{aligned}$$

$$F_{g1x} = 98 \text{ N} \sin 28^\circ = 46 \text{ N}$$

$$F_{g1y} = 98 \text{ N} \cos 28^\circ = 86.5 \text{ N}$$

$$\begin{aligned} \textcircled{3} F_f &= \mu F_N \\ &= (0.20)(86.5 \text{ N}) \\ &= 17.3 \text{ N} \end{aligned}$$

$$\textcircled{4} F_{\text{net}} = F_{g2} - F_{g1x} - F_f$$

$$(10 \text{ kg} + m_2)(2.45 \text{ m/s}^2) = m_2(9.8 \text{ m/s}^2) - 46 \text{ N} - 17.3 \text{ N}$$

$$24.5 \text{ N} + m_2(2.45 \text{ m/s}^2) = m_2(9.8 \text{ m/s}^2) - 46 \text{ N} - 17.3 \text{ N}$$

$$m_2(9.8 \text{ m/s}^2) - m_2(2.45 \text{ m/s}^2) = 24.5 \text{ N} + 46 \text{ N} + 17.3 \text{ N}$$

$$m_2(7.35 \text{ m/s}^2) = 87.8 \text{ N}$$

$$m_2 = \frac{87.8 \text{ N}}{7.35 \text{ m/s}^2}$$

$$m_2 = 11.9 \text{ kg}$$
